EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John L. Rogitz on August 20, 2007.

The application has been amended as follows:

In the claims

1. (currently amended) A computer readable medium bearing logic executable by a computer for:

receiving, from [the] a user, a unique identifier, the unique identifier comprising both a sequence of keystrokes and [the] inter-keystroke intervals associated with provision of those keystrokes;

comparing the unique identifier received from the user with a reference unique identifier by:

comparing the sequence with a sequence from the reference unique identifier to render a sequence comparison;

comparing at least one absolute inter-keystroke interval of the unique identifier with a respective absolute inter-keystroke interval of the reference unique identifier to render an absolute comparison and returning a true indication if the absolute

Art Unit: 2135

inter-keystroke interval of the unique identifier is within a predetermined tolerance of the absolute inter-keystroke interval of the reference identifier;

comparing at least one relative inter-keystroke interval of the unique identifier, the relative inter-keystroke interval being a ratio of an absolute inter-keystroke interval in the unique identifier to a predetermined absolute inter-keystroke interval in the unique identifier, with a respective reference relative inter-keystroke interval of the reference unique identifier, the reference relative inter-keystroke interval being a ratio of an absolute inter-keystroke interval in the reference unique identifier to a predetermined absolute inter-keystroke interval in the reference unique identifier, to render a relative comparison and returning a true indication if the relative inter-keystroke interval of the unique identifier is within a predetermined tolerance of the relative inter-keystroke interval of the reference identifier; and

authenticating said user if the sequence comparison, the absolute comparison, and said relative comparison all return a true indication, further comprising the step of entry by the user of the reference unique identifier, wherein said predetermined tolerance is explicitly provided by [a] the user during said step of entry by the user of the reference unique identifier.

3. (Canceled).
